

Task and Environment Diversity Requirements

updated: 2026-04-06

Environments

- No single category may exceed 20% of the total data volume.
- The top 5 categories combined must not exceed 60% of the total mix.
- The top 10 categories combined must not exceed 85% of the total mix.
- Each delivery must include data from at least 15 distinct categories.
- Categories include: Retail and Consumer Goods, Fashion, Repair Services, Food and Beverage, Home, Construction and Hardware, Food Processing, Printing and Design, Factory, Hospitality, Automotive and Transport, Sports and Recreation, Creative Workshops, Administrative, Education and Training, Industrial Manufacturing, Energy and Utilities, Healthcare and Pharmacy, Administrative & Office Services, Cleaning and Sanitation, Laboratory / Scientific, Childcare and Caregiving, Public Safety and Emergency Response, Agriculture and Farming, Beauty and Personal Care, Entertainment and Events, Other

Tasks

What we want:

- We are interested in diverse data of real people doing real work
 - We are interested in the wide diversity of humans performing tasks across a variety of real-world conditions, where hands are visible to the user. We are not just focused on any particular domain, or only robotics related fields
 - We are interested in work that requires complex multitask procedures. Not interested in highly repetitive tasks
 - We want tasks that require operators to exhibit multiple skills
 - E.g we do not want 10 minutes of someone just cutting a tomato. Long form videos of single repetitive tasks should be cropped down
 - Want a very diverse set of tasks that span a plethora of human jobs
 - Not just household tasks but even jobs as mechanics, construction, healthcare etc
 - Want human interaction and speaking in some of the data

Example Tasks

Skill Group	Easy (Anyone)	Medium (Adults)	Hard(Skilled)
Cleaning & Sanitation	Wiping tables / surfaces	Vacuuming and mopping entire house	Cleaning an entire home
Clothing & Laundry	Folding clothes	Doing laundry end-to-end	Managing laundry system (sorting, stain treatment, scheduling)
Food Preparation & Cooking	Cleaning/sorting fruits and vegetables	Cooking a full meal (multi-step)	Advanced cooking (multi-dish timing)
Organization & Inventory	Organizing shelves	Grocery shopping + organizing	Inventory management systems
Retail Operations	Bagging groceries	Cashier tasks	Managing store operations

Home Appliance Interaction	Loading/unloading dishwasher	Setting up home appliances	Appliance repair (washer, fridge)
Construction & Building	Carrying light items	Installing drywall panels	Structural framing & load calculations
Furniture & Assembly	Assembling simple items	Assembling consumer furniture (IKEA)	Building furniture (custom or complex)
Mechanical / Automotive	Basic vehicle check (e.g. tire pressure)	Performing oil changes / tire replacement	Engine diagnostics & repair
Tool Use & Technical Work	Labeling items / basic tool use	Using power tools / installing outlets	Blueprint interpretation & full builds
Electronics & Diagnostics	Running basic diagnostics	Replacing hardware components	Circuit-level electronics repair
Healthcare & Medical Tasks	Basic caregiving tasks	Drawing blood / administering routine meds	Diagnosing conditions / performing surgery

Tasks are categorized by difficulty. Note that this is not a complete list.

- Easy: We categorize these as simple tasks that could be done by a 5+ year-old person
- Medium: These are tasks that can be done by any adult and involve multiple steps or light coordination.
- Hard: These are tasks that would be complex for most adults and require skill labour requiring training

Task Distribution

- No single hard task may exceed 6% of the total delivery hours.
- No single medium task may exceed 4% of the total delivery hours.
- No single easy task may exceed 1.5% of the total delivery hours.
- 200 hours max per task

Task Environment distribution

Below are limits placed on (task-id, environment-id) pairs

- Hard tasks: Maximum: 40 hours per exact (task-id, environment-id) pair
- Medium tasks: Maximum: 20 hours per exact (task-id, environment-id) pair
- Easy tasks: Maximum: 10 hours per (task-id, environment-id) pair
- Maximum: 1 hours per exact (task-id, environment-id) pair for any factory repetitive motion
 - This includes any repeated same table top manipulation. Walking around and doing more dynamic tasks in the factory allows up to 2 hours.

Operator difficult environment distribution

Below are limits placed on (operator-id, task-id, environment-id) pairs

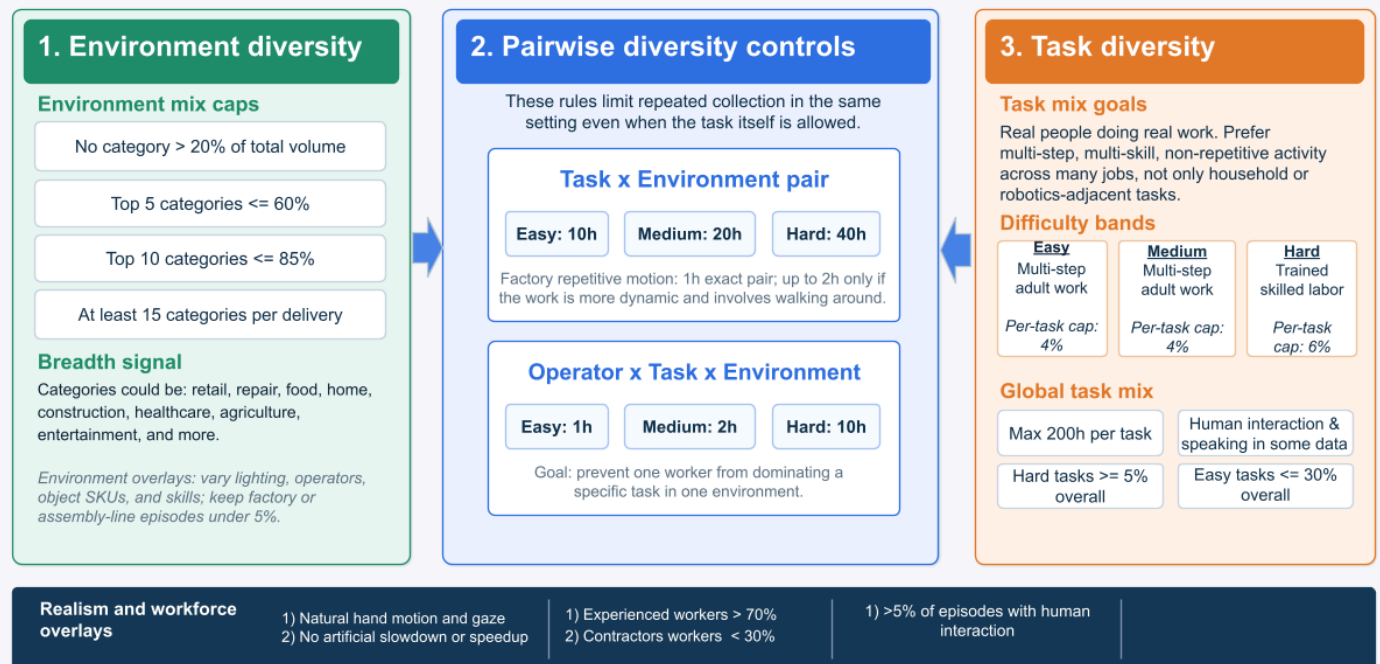

- Hard tasks: Maximum: 10 hours per exact (operator-id, task-id, environment-id) pair
- Medium tasks: Maximum: 2 hours per exact (operator-id, task-id, environment-id) pair
- Easy tasks: Maximum: 1 hours per exact (operator-id, task-id, environment-id) pair
- We are interested in diverse data of real people doing real work
 - Internal classification models are run over data to assess quality of this

- Max 30% contractors and at least 70% must be real workers. More real workers are preferable
- Task difficulty Distribution
 - No more than 30% of tasks can be in the easy category. At least 5% must be in Hard Category
- Operators should perform tasks as usual, and not perform abnormal actions for data collection.
- Highly repetitive motion should be filtered out
 - E.g 20 demonstrations of the exact same circular pot stirring motion
- (Optional) Want at least 5% of videos to include interacting with other humans
 - This should include natural interactions not scripted
