

xp_robotics delivery feedback

Prepared for xp_robotics / generated 2026-08-05T12:35:43.959767+00:00

Delivery overview

Overall score: 56.3 / 100

This delivery shows clear progress toward credible egocentric work coverage. The representative frames include paperwork, pottery, footwear merchandising, component sorting, jewelry making, basket weaving, commercial food preparation, and flooring installation. Most footage captures real work and passes the basic usability bar, with particularly useful coverage in construction, crafts, repair, food preparation, assembly, and retail operations.

The next delivery should prioritize genuinely different workplaces and workflows rather than additional variations of existing desk, tabletop, construction-finishing, sorting, and assembly footage. Correct repeated source records, strengthen hand framing and active progress, broaden under-supplied environments and jobs, add meaningful human interaction, and move the difficulty mix toward 30% easy / 40% medium / 30% hard.

What is working

- The work generally appears authentic and occupationally grounded rather than staged.
- Representative footage clearly captures skilled manipulation in pottery, jewelry making, basket weaving, commercial food preparation, and flooring installation.
- The delivery adds useful construction, manufacturing, food-service, repair, retail, clothing, agriculture, and craft coverage compared with the prior paperwork-heavy mix.
- Hands and task objects are visible in most usable sequences, and most items pass the basic requirements checks.
- The delivery includes technically involved hard work such as flooring, pottery, fabrication, and repair.

What needs improvement

- Repeated item identifiers, exact repeated records, and near-identical moments indicate that source accounting and pre-delivery deduplication remain insufficient.
- Chip sorting, laptop cleaning, paperwork filing, flooring, cabinet installation, assembly, and generic close-up repair contain many small variations with limited incremental value.
- The representative construction frames repeatedly use similar downward, floor-level views, while tabletop sorting and craft frames use closely repeated compositions.
- The current top five environments account for 63.1% of the delivery, above the configured 60% target, despite coverage across more than 15 approved environment categories.
- Assembly & Installation is 20.7% of the skill mix, and Assembler is 9.6% of the job mix, reinforcing the concentration in assembly-style work.
- The difficulty mix is 38.0% easy, 43.7% medium, and 18.3% hard, leaving hard, multi-stage workflows well below the 30% target.

Scorecard

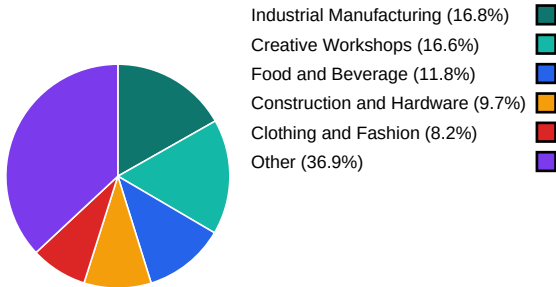

Area	Score	How it is scored and how to improve
Visual diversity	3.4 / 15	Visual diversity checks whether videos look meaningfully different from one another, with the largest penalty for duplicate or near-duplicate footage. To improve: collect more visually distinct scenes, environments, and workflows instead of many similar scene variants.
Environment diversity	6.6 / 10	Environment diversity checks whether videos are spread across the kinds of work in our golden dataset, which is the balanced reference mix we want future deliveries to approach. To improve: spread the next delivery across more approved environments and reduce the dominant environment share.
L2 location diversity	3.4 / 10	L2 location diversity emphasizes closeness to the golden target distribution while retaining a smaller internal-breadth term, so broad but misallocated coverage cannot receive full credit. To improve: move the L2 location mix toward the golden target and keep labels within the approved taxonomy.
L3 scene diversity	2.2 / 10	L3 scene diversity emphasizes closeness to the golden target distribution while retaining a smaller internal-breadth term, so broad but misallocated coverage cannot receive full credit. To improve: move the L3 scene mix toward the golden target and keep labels within the approved taxonomy.
Skill diversity	7.0 / 10	Skill group diversity checks whether videos are spread across the kinds of work in our golden dataset, which is the balanced reference mix we want future deliveries to approach. Sampled task-diversity review caps the label-distribution score when labels do not correspond to visibly distinct work. LLM review: 7.0 / 10. To improve: add more distinct skill groups with balanced coverage, not small label variants.
Job diversity	5.4 / 10	Job family diversity checks whether videos are spread across the kinds of work in our golden dataset, which is the balanced reference mix we want future deliveries to approach. Sampled task-diversity review caps the label-distribution score when labels do not correspond to visibly distinct work. LLM review: 7.0 / 10. To improve: add more distinct job families and workflows across different kinds of work.
Task diversity	5.4 / 10	Task diversity checks whether videos are spread across the kinds of work in our golden dataset, which is the balanced reference mix we want future deliveries to approach. Sampled task-diversity review caps the label-distribution score when labels do not correspond to visibly distinct work. LLM review: 8.0 / 10. To improve: add more distinct concrete tasks, not small wording variants of the same action.
Difficulty quality	15.8 / 20	Difficulty quality treats the configured golden mix as a minimum difficulty bar: 30.0% easy / 40.0% medium / 30.0% hard. Easy and medium work above their target shares reduce the score, while additional hard work earns a small bonus. To improve: move the task mix toward 30.0% easy / 40.0% medium / 30.0% hard work.
Requirements quality	13.6 / 15	Requirements quality checks whether videos meet the basic delivery bar: usable progress, appropriate framing and image quality, and no major repetitive or invalid footage. To improve: reduce repetitive motion and crop-down framing flags by keeping active work and working hands clearly framed.
Style quality	10.4 / 20	Style quality summarizes how useful, clear, and novel the reviewed videos are on average. To improve: collect cleaner, more novel task sequences with stronger visual usefulness and less generic footage.

Difficulty note: More hard tasks are generally better and are not penalized. The difficulty score only decreases when the delivery contains more easy or medium tasks than the saved golden target allows.

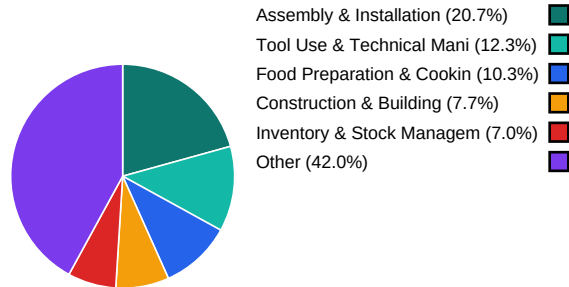

Coverage mix

These charts show the current dataset mix. The next-delivery targets below focus on the slices that are missing or over-concentrated.

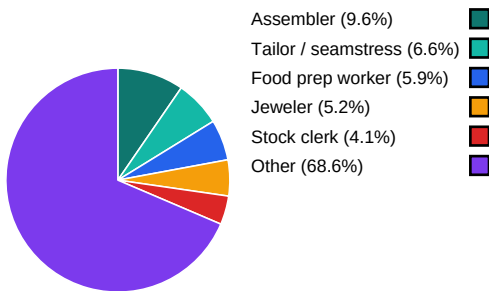

Environments

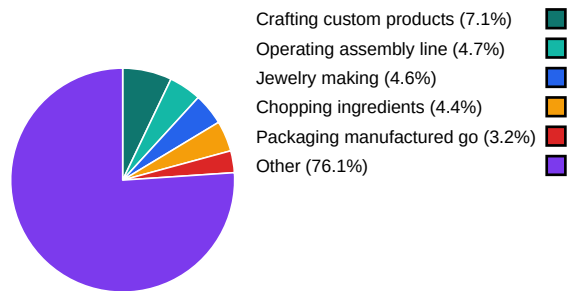

Skill groups

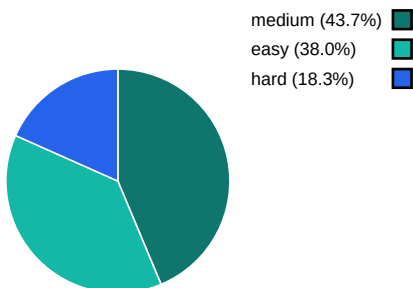

Job families

Tasks

Task difficulty

Coverage gaps

- Add substantial coverage outside Industrial Manufacturing across all other approved environments: Childcare and Caregiving, Public Safety and Emergency Response, Entertainment and Events, Other.
- Spread the top five environments below the 60.0% cap; they currently make up 63.1% of the dataset.
- Spread the top ten environments below the 85.0% cap; they currently make up 88.2% of the dataset.

Coverage priorities

- Environment priority: reduce over-concentrated environments and use the full underweight environment list in Next delivery targets.

- Skill/job priority: use the full underweight skill group and job family lists in Next delivery targets instead of optimizing around one requested category.
- Difficulty priority: move the next delivery toward the configured easy / medium / hard target.

Diversity analysis

The largest visible domains are interior finishing and installation, chip sorting into compartment trays, close-up mechanical and two-wheeler repair, stovetop beverage preparation, and office-laptop cleaning. The representative frames add paperwork, pottery, footwear merchandising, jewelry making, basket weaving, commercial food assembly, and flooring, but repeated downward hand views, tabletop setups, and unfinished-room construction scenes create substantial visual overlap. This means the delivery has real cross-domain coverage, but too much of its apparent variety comes from minor changes within familiar scene families.

Industrial Manufacturing represents 16.8% of the current environment mix, Creative Workshops 16.6%, Food and Beverage 11.8%, and Construction and Hardware 9.7%. Assembly & Installation leads skills at 20.7%; Assembler leads jobs at 9.6%; and Crafting custom products leads tasks at 7.1%. The mix therefore remains concentrated in assembly, crafts, construction finishing, sorting, and food preparation. Hard work is only 18.3%, so the next collection needs more diagnostic, multi-stage, mobile, collaborative, and consequential workflows rather than more fixed-station repetition.

Quality issues to fix

- Insufficient hand visibility: 2.4% of the dataset flagged.
- Idle or stalled task progress: 1.5% of the dataset flagged.
- Rejected items: 4.1% of the dataset did not meet review requirements.
- Camera angle: 10.3% of the dataset was flagged for camera angles that did not clearly capture the work area.

Priority actions

- Audit the manifest and quarantine repeated item IDs and exact repeated records. Supply stable unique item IDs, source-session IDs, parent-video relationships, and timestamps, then run source-aware and visual deduplication before submission.
- Cap contributions by worker, source session, task, location, and workflow stage. Retain only materially different stages rather than adjacent moments or renamed variants of the same action.
- Maintain at least 15 approved environment categories and keep every single environment at $\leq 20\%$. For the next delivery, keep Administrative & Office Services under 5.0%, Creative Workshops under 5.0%, Administrative under 5.0%, and Industrial Manufacturing under 11.0%.
- Keep Office Workspace and Office locations under 5.0% each; also keep Handcraft Workshop and Jewelry Handicraft under 5.0% each. Keep Desk Area, Workstation, Meeting Room, and Packaging Station scenes under 5.0% each.
- Keep Organization & Tidying under 7.1%, Assembly & Installation under 8.4%, Agriculture & Farm Work under 5.0%, and Packing & Bagging under 7.7%. Keep Office clerk, Packaging operator, Assembler, and Jeweler under 5.0% each.

Next delivery targets

- Environment target: add meaningful non-Industrial Manufacturing coverage across all other approved environments: Childcare and Caregiving, Public Safety and Emergency Response, Entertainment and Events, Other.
- Skill/job target: broaden the next delivery across more skill groups including Electronics & Diagnostics, Healthcare & Caregiving, Repair & Maintenance, Dish Handling, Retail & Service Operations, Human Interaction & Handoffs, Home Appliance Interaction, Pick and Place / Object Handling and job families including Account manager, Accountant, Airport ramp agent, Architect, Bank teller, Banker, Bartender, Billing clerk instead of optimizing around one missing label.
- Difficulty target: move toward a 30.0% easy / 40.0% medium / 30.0% hard golden mix; current mix is 38.0% easy, 43.7% medium, and 18.3% hard.
- Workflow target: broaden beyond Assembly & Installation, Assembler, and Crafting custom products with multi-step workflows across different jobs, and avoid highly repetitive task-environment slices.

- Across your last 2 reviewed deliveries, Administrative & Office Services is 25.0% of your environment mix against a 2.1% golden target. In the next delivery, keep Administrative & Office Services under 5.0%.

Operator coverage

Operator hours show collection staffing concentration. The coverage table reports the minimum number of operators needed to account for each cumulative share of recorded hours.

Operator	Hours	Share	Hours covered	Operators needed
unknown	6.66	2.2%	20.0%	23
10547931	3.47	1.2%	40.0%	68

L3 scene target heatmap

Every configured or observed label shows its current percentage and how far it is under or over target. Darker red or blue means farther from target; green means on target.
